Description		
CRN 5-16 A-P-A-E-HQQE		
Product No.: 96517252		
Vertical, multistage centrifugal pump with i contact with the liquid are in high-grade sta handling, and easy access and service. Po (Victaulic®) couplings.	ainless steel. A cartridge s	me the level (inline). Pump materials in haft seal ensures high reliability, safe rigid split coupling. Pipe connection is via PJE
The pump is fitted with a 3-phase, fan-coo	led asynchronous motor.	
<ul> <li>Further product details</li> <li>Steel, cast iron and aluminium component (CED) process. CED is a high-quality dip-p deposition of paint particles as a thin, well- pretreatment. The entire process consists</li> <li>1) Alkaline-based cleaning.</li> <li>2) Zinc phosphating.</li> <li>3) Cathodic electro-deposition.</li> <li>4) Curing to a dry film thickness 18-22 my The colour code for the finished product is</li> </ul>	painting process where an -controlled layer on the sur of these elements: m.	ating made in a cathodic electro-deposition electrical field around the products ensures face. An integral part of the process is a
Pump A standard split coupling connects the pum means of two coupling guards.	np and motor shaft. It is er	closed in the pump head/motor stool by
The pump head and flange for motor mour separate component (stainless steel). The	nting is made in one piece pump head has a combin	(cast iron). The pump head cover is a ed 1/2" priming plug and vent screw.

The pump is fitted with a balanced O-ring seal unit with a rigid torque-transmission system. This seal type is assembled in a cartridge unit which makes replacement safe and easy. Due to the balancing, this seal type is suitable for high-pressure applications. The cartridge construction also protects the pump shaft from possible wear from a dynamic O-ring between pump shaft and shaft seal.

Primary seal:

Rotating seal ring material: silicon carbide (SiC)

ion	١
	ion

Date:

16/02/2019

Stationary seat material: silicon carbide (SiC) This material pairing is used where higher corrosion resistance is required. The high hardness of this material pairing offers good resistance against abrasive particles.

Secondary seal material: EPDM (ethylene-propylene rubber)

EPDM has excellent resistance to hot water. EPDM is not suitable for mineral oils.

The shaft seal is screwed into the pump head.

The chambers and impellers are made of stainless-steel sheet. The chambers are provided with a PTFE neck ring offering improved sealing and high efficiency. The impellers have smooth surfaces, and the shape of the blades ensure a high efficiency.

The pump has a stainless-steel base mounted on a separate base plate. The base and base plate are kept in position by the tension of the staybolts which hold the pump together. The outlet side of the base has a combined drain plug and bypass valve. The pump is secured to the foundation by four bolts through the base plate. The base is prepared for connection by means of PJE (Victualic®) couplings.

### Motor

The motor is a totally enclosed, fan-cooled motor with principal dimensions to IEC and DIN standards. The motor is flange-mounted with tapped-hole flange (FT).

Motor-mounting designation in accordance with IEC 60034-7: IM B 14 (Code I) / IM 3601 (Code II).

Electrical tolerances comply with IEC 60034.

The motor efficiency is classified as IE3 in accordance with IEC 60034-30-1.

The motor does not incorporate motor protection and must be connected to a motor-protective circuit breaker which can be manually reset. The motor-protective circuit breaker must be set according to the rated current of the motor (11/1).

The motor can be connected to a variable speed drive for adjustment of pump performance to any duty point. Grundfos CUE offers a range of variable speed drives. Please find more information in Grundfos Product Center.

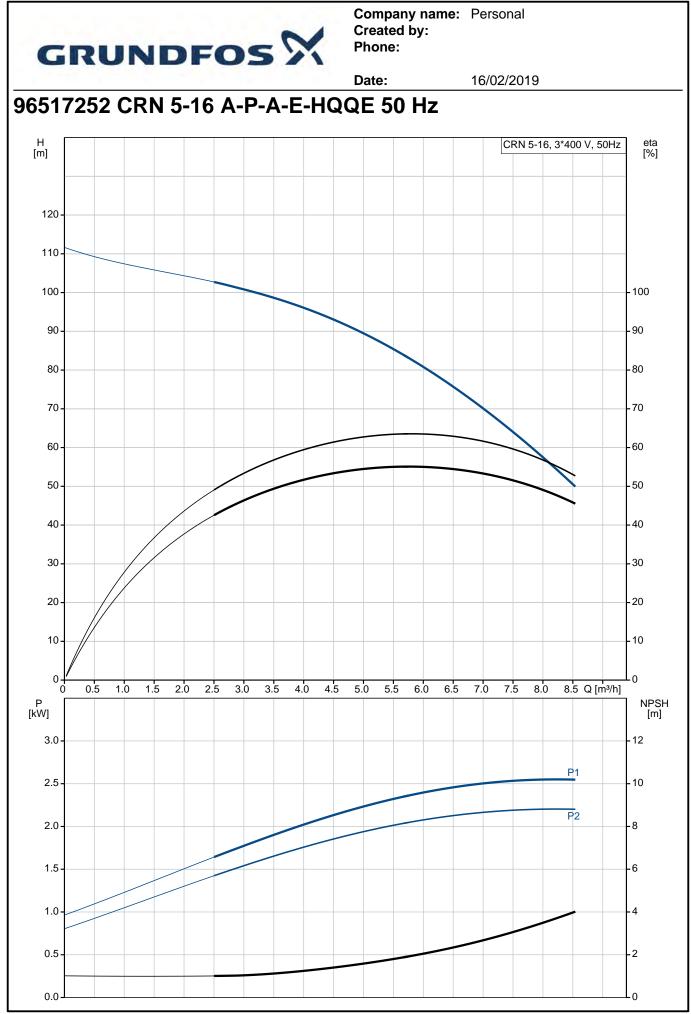

## **Technical data**

Controls: NONE Frequency converter: 1:00.0
